Relevant Project Experience

Feb 2021	Discord Bot: Utilizing Cloud Computing platform repl.it, I created this discord bot that sits in an active Discord server and monitors user's text for sad words and send encouraging words in return. The Great Day Ahead bot also sends a daily morning inspirational message when any user types good morning. This bot was created using node.js/javascript,express.js, discord.js API , zenquotes API, and it is hosted in the cloud on the repl.it database's platform.
Apr 2021	E-Commerce Web Shop: This E-commerce Web Application was created utilizing the Commerce.js Api/Platform, Javascript, ReactJS, and Stripe API. The web application was created for a business that needed a Webshop to sell their inventory to clients. The application has the ability to post new products in a responsive design that accommodates mobile and web, allow transactions using the stripe api and being able to manage the shipping and handling using the commerce.js api and platform.
Nov 2020	Music-Share Web App: Music share is a Web Application that integrates the Spotify Api and Youtube Api into one browser, that allows users to create/generate playlists, track their likes and share it with other people using a link to their personal profile. This Web application was created using the Agile Methodology, utilizing a team of Scrum Master, Designers, and Software Engineers. The technical stack used for this was MERN(Mongo.db,Express.js,ReactJS,Node.js).
Feb 2019	iOS App Creator: Pet Agenda Controller, Role: Software Engineer, Project Manager ; Worked on a team to create an application that allows user to manager their pet feeding and exercise schedules, set reminders and keep a strong relationship between pet owner and pet. My duties during this project was ensuring the team used the Agile Methodology. Create various features for the application and present our application and various stages of the process to a Partner.
